

About the PERSPECTIVE Program

The PERSPECTIVE Program is evaluating the safety and efficacy of an investigational oral drug on cognitive function in adults with early Huntington's disease. The program is comprised of several clinical research studies. This investigational drug is being tested to evaluate if it has an effect on cognitive symptoms associated with early Huntington's disease. Investigational drugs are not approved by a health authority for any use, as the safety and efficacy have not been established.

Talk to your healthcare provider about participating in the PERSPECTIVE Program.

You may invite a partner to attend study visits and help you to complete study activities. While having a partner is not required for participation, it is recommended to give you additional support and insights about your condition.

If you take part in one of the first two clinical research studies in the program, you may be eligible to participate in a later one where all participants will receive active investigational drug (no placebo), sometimes referred to as an Open Label Extension. This study is currently enrolling. If you decide you're interested in participating, speak with the study team for more information.

Working together to outsmart HUNTINGTON'S DISEASE

Learn about a clinical research program investigating cognitive skills in those with early Huntington's Disease (HD) – and help advance the potential future of HD.

HDResearchPerspective.com

Eligibility for each study within the PERSPECTIVE Program is determined during the screening visit. During the visit you will:

1. Meet with the program doctor and staff
2. Review additional information
3. Have an initial evaluation and assessments
4. Complete the program questionnaires

How Do I Qualify?

To be eligible for the studies you must:

- Be 25 to 65 years of age
- Have been diagnosed with Huntington's disease
- Be able to walk (use of a cane or walker is permitted)

The program doctor will discuss additional requirements.

Some of the studies may include an optional driving simulator to evaluate cognitive skills while performing an everyday task.

If you qualify and decide to participate:

- A program doctor will closely monitor you, your symptoms, and your overall health
- All program-related procedures and the investigational oral drug will be provided at no cost
- Transportation assistance may be available. Please talk to the study team for more information

Your safety is the highest priority while participating. If you have questions or concerns at any point throughout the study, a study staff member is available. The study staff can also tell you about their COVID-19 safety protocols.

Your participation in the PERSPECTIVE Program is completely voluntary. If you are eligible and decide to participate, you are free to withdraw at any time, for any reason, without any penalty or effect on your medical care.

About Huntington's Disease

Huntington's disease is a progressive brain condition caused by a genetic mutation¹ that is passed down in families.^{1,2} It causes uncontrolled movement, decline of mental (cognitive) abilities, and emotional issues.¹

Cognitive symptoms may include:^{3,4}

- Difficulty paying attention
- Trouble thinking through steps of an activity
- Difficulty thinking through complex problems
- Difficulty planning, remembering, and staying on task
- Impaired judgment
- Difficulty with multi-tasking

As Huntington's disease progresses, it will become more and more difficult to continue performing daily activities. Although there is no cure for Huntington's disease, there are ways to help manage some of the physical and emotional symptoms. Currently no treatments are approved to specifically manage cognitive symptoms. **Talk to your doctor if you have any questions about Huntington's disease or its symptoms.**
